Hari.mp4 (1.83 Mb)Summary: The present invention relates to testing the rigidity of metal sheets, more particularly sheets of
aluminum or other metals. 2. Description of the Prior Art Metal sheets, such as metal sheets of aluminum, are often required to
meet certain requirements for rigidity and strength in order to be used in various structures, such as in the construction of
aircraft or automobiles. As these metal sheets are generally relatively thin, it is difficult to test the rigidity and strength of these
metal sheets to verify their suitability for their intended purpose. Also, thin metal sheets are more likely to be bent or distorted
during the testing process. Currently available metal sheet testing apparatus for rigidity and strength are generally able to apply
pressure only in a single plane in order to either push against the edge of the sheet or place it in contact with a rigid surface in
order to apply pressure in a direction which is not parallel to the plane in which the pressure is being applied. Some of the metal
sheet testing apparatus available are able to apply pressure in two perpendicular directions to a sheet in order to test the rigidity
of the sheet. However, these metal sheet testing apparatus are generally large in size. Additionally, they tend to require a great
deal of setup time, as they must be positioned at the corners of a sheet which is being tested in order to apply pressure in two
perpendicular directions. Other metal sheet testing apparatus available are able to exert pressure in two perpendicular directions
to a sheet, but have a cantilevered plate which is able to exert the pressure in only a single direction. The cantilevered plates of
these metal sheet testing apparatus are generally relatively large in size in order to exert the pressure in two perpendicular
directions.N.E.W. N.E.W. is the debut EP by the American rock band, Fleetwood Mac. It was first released in the 82157476af
